AutoCAD 2023 introduces new markup features that enable CAD users to collaborate more efficiently by sharing and integrating feedback with other AutoCAD users and into other engineering applications. With a click of a button, users can import feedback from text-based formats such as Word, Excel, or PDF, then make the changes in the same drawing, or integrate the changes into other drawings. With new Markup Associate technology, markups on drawings are automatically tracked and rendered as annotations. This enables users to track changes on annotations and markup formats such as dimension line, comments, labels, annotative views, etc. With the new Markup Import feature, CAD users can import markup and annotations into a drawing in seconds. The new features enable CAD users to more efficiently integrate feedback from external sources, such as other engineering applications, into AutoCAD. With Markup Assist technology, AutoCAD enables more efficient collaboration by enabling CAD users to incorporate feedback and changes into a drawing with a few clicks. The new features enable users to attach annotative views, text, dimension lines, legends, rulers, and other annotations directly into the drawing, in addition to importing external feedback. Guidelines: Model space and constraints are now visible in 2D views. Drawings can be saved with model space and constraints. Guidelines can be set for drawings with multiple planes and views. Guidelines work with proportional and angular dimensions. Change Manager: Manage changes to existing drawings. Compare and preview changes to existing drawings. Apply and revert changes to existing drawings. Create a new drawing to view the changes in a separate drawing. Create new changes for the drawing or multiple drawings. Create a default change folder. Copy change objects to the clipboard. Import changes to existing drawings. Import changes from an XML source. Import files created by the File Open dialog. Import files from an FTP server.
